

100% sports bottles

EURO BOTTLE

Eurobottle introduces: The world's first real Biobased sports bottle

"Support a healthy and sporty lifestyle while caring for our environment and the fossil resources of our earth"

This is what Eurobottle fully subscribes by introducing: the Biobased sports bottle!

Recent investments in product development makes it possible that Eurobottle can now offer her customers a sports bottle produced out of sugar cane based raw materials.

No use of earth's scarce fossil resources, but using the renewable raw material sugar cane that absorbs CO2 and lowers greenhouse gas emission.

This is one of the latest achievements by which Eurobottle further fulfils its Corporate Social Responsibility (CSR) strategy. Acting in an environmentally responsible way means that one uses products that can be repeatedly used, remain in good shape and after a long lifecycle can be recycled in commonly known recycling programs for plastics.

The functional characteristics of green plastic are exactly similar to those of conventional plastic materials and guarantee a sports bottle that matches the high quality requirements of our broad customer base. This is one of Eurobottle's most important standards. Of course all materials used within Eurobottle products are food safe and fully recyclable.

The Biobased sports bottle can be printed similar to the entire Eurobottle product range. It offers the customers a personalized promotional product that supports a healthy and sportive lifestyle and contributes to a better environment.

The Biobased sports bottle:

- High quality sports bottle with a long life cycle*
- Supports many healthy and sportive hours*
- Customizable for your personal promotional message*
- Fits all CSR strategies*
- Contributes to a reduced carbon footprint!*
